Brand Statement: Web Dev

Back-End Developer with a lifetime of solving problems, puzzles, and riddles. I recently received a six-month certification in both front and back-end sides of web development from UC Davis Full Stack Web Development Coding Bootcamp. This course covered so much information, including MERN stack development, responsive web design, JavaScript, libraries, Frameworks, Node.JS, Github, deployment, databases, documentation, etc. Our focus of the course was to grasp what web development was and apply those practical concepts to create something meaningful, powerful and what the customer was looking for! I deliver top-class, professional websites with the client's company vision at the center of each project! One great achievement of the feat was our front-end plus back-end, from scratch, MERN stack group project that allows family and friends to send and create images with their comments, aka memes. I am prepared, equipped, and ready to work with a fast-paced web-dev team to create some of the best websites out there.

Professionally,
Santiago Venegas
