Brand Statement:

Web Dev

Back-End Developer with a lifetime of solving problems, puzzles, and riddles. I recently received a six-month certification in both front and back-end sides of web development from UC Davis Full Stack Web Development Coding Bootcamp. This course covered so much information, including MERN stack development, responsive web design, JavaScript, libraries, Frameworks, Node.JS, Github, deployment, databases, documentation, etc. Our focus of the course was to grasp what web development was and apply those practical concepts to create something meaningful, powerful and what the customer was looking for! I aim to have the best quality, up-to-date practices and syntax, implemented with the customer's vision at the heart of our work. One great achievement of the feat was that I was able to read documentation, transfer that tip to the project I was doing and get the result I was looking for. I am ready to work with a great team, doing great work, for the clients, everytime.

Professionally,
Santiago Venegas
